```

```
11. J. Biol. Chem. 275:21539-21548(2000).
12. FUNCTION: MEDIATES THE ENDOCYTOSIS OF GLYCOPROTEINS BY MACROPHAGES, IN SEVERAL RECOGNITION AND UPTAKE PROCESSES.
13. C. SUBCELLULAR LOCATION: Type I membrane protein.
14. SIGELLAMBOUS: CRDS 1-3 HAVE AT MOST VERY WEAK AFFINITY FOR CARBOHYDRATE. CRD 4 SHOWS THE HIGHEST AFFINITY BINDING AND HAS MULTISPECIPICITY FOR A VARIETY OF MONOSACCHARIDES. AT LEAST 3 CRDS CC (4, 5, AND 7) ARE REQUIRED FOR HIGH AFFINITY BINDING AND ENDOCYTOSIS OF MULTIVALENT GLYCOCONJUGATES.
15. SIMILARITY: CONTAINS 8 C-type lectin domain.
16. SIMILARITY: CONTAINS 8 C-type lectin domain.
17. C. -- SIMILARITY: CONTAINS 1 ricin B-type lectin domain.
18. C. -- DATABASE: NAME-ENROW, NOTE-PROW 5:85-89(2001).
                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. TISSUE SPECIFICITY: Cerebral white matter. V0 and V1 are expressed in the central nervous system, and in a number of mesenchymal and cepithelial tissues; the major isoform v2 is restricted to the central nervous system.

DEVELOPMENTAL STAGE: Disappears after the cartilage development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (By similarity).

Blomberg L.A., Chan W.-Y., Clerch L., Massaro D.;
Molecular cloning and characterization of two developmentally regulated genes in rat lung.";
Submitted (SEP-2000) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: May play a role in intercellular signaling and in the regulation of cells with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.
-! SUBCUIT: Interacts with FBLNI (By similarity).
-! SUBCELLULAR LOCATION: Secreted; extracellular matrix.
                                                                                                                                                                                                                                                                                 (By similarity).
--- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
--- SIMILARITY: Contains 2 link domains.
--- SIMILARITY: Contains 2 EGF-like domains.
--- SIMILARITY: Contains 1 C-type lectin family domain.
--- SIMILARITY: Contains 1 Sushi (SCR) domain.
--- SIMILARITY: BELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.
                                                                                                                                                                                                                                     IsoId=09ERB4-3; Sequence=VSP 003092;
TISSUE SPECIFICITY: In kidney is expressed in the papillary area, but not in glomeruli.
DEVELOPMENTAL STAGE: Disappears after the cartilage development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glycoprotein; Proteoglycan; Lectin; Extracellular matrix; Sushi;

Isoid=P13611-5; Sequence=VSP_003086;
ISSUE SPECIFICITY: Cerebral white matter. V0 and V1 is expressed in normal brain, gliomas, medulloblastomas, schwannomas, neurofibromas, and menningiomas; v2 is restricted to normal brain and gliomas; v3 is found in all these tissues except medulloblastomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -1- DEVELOPMENTAL STAGE: Disappears after the cartilage development.
-1- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-1- SIMILARITY: Contains 2 link domains.
-1- SIMILARITY: Contains 2 EGF-like domains.
-1- SIMILARITY: Contains 1 C-type lectin family domain.
-1- SIMILARITY: Contains 1 Sushi (SCR) domain.
-1- SIMILARITY: BELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GO; GO:0005578; C:extracellular matrix; TAS.

-1-TISSUE SPECIFICITY: Prechondrogenic condensation area of developing limb buds.
-1- DEVELOPMENTAL STAGE: Disappears after the cartilage development (By similarity).
-1- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-1- SIMILARITY: Contains 2 link domains.
-1- SIMILARITY: Contains 2 EGF-like domains.
-1- SIMILARITY: Contains 1 EGF-like domains.
-1- SIMILARITY: Contains 1 Sushi (SCR) domain.
Versican core protein precursor (Large fibroblast proteoglycan) (Chondroitin sulfate proteoglycan core protein 2) (PG-M).

Molecular and cellular properties of the rat AA4 antigen, a C-type Tiechin-like receptor with structural homology to thrombomodulin.";

To Biol. Chem. 275:34382-34392(2000).

Cid, mannose-binding lectin (MBL2) and pulmonary surfactant protein A (SPA). May mediate the enhancement of phagocytosis in monocytes and macrophages upon interaction with soluble defense collagens. May play a role in interaction with soluble defense collagens. May play a role in interactilular adhesion.

CINESTELULAR LOCATION: Type I membrane protein.

DOMAIN: TWO GLOBULAR DOMAINS, G1 AND G2, COMPRISE THE AMINO
TERMINUS OF THE PROTECGLYCAN, WHILE ANOTHER GLOBULAR REGION, G3,
MAKES UP THE C-PERMINUS. G1 CONTAINS LINK DOMAINS AND THUS
CONSISTS OF THREE DISULFIDE-BONDED LOOP STRUCTURES DESIGNATED AS
THE A, B, B' MOTIFS. G2 IS SIMILAR TO G1. THE KERATAN SULFATE (KS)
AND THE CHONDROITIN SULFATE (CS) ATTACHMENT DOMAINS LIE BETWEEN G2
                                                                                                                                                                                                                                           Antonsson P., Heinegaard D., Oldberg A.;

-!- FUNCTION: THIS PROTEOGLYCAN IS A MAJOR COMPONENT OF EXTRACELLULAR MATRIX OF CARTILAGENOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEIN IS TO RESIST COMPRESSION IN CARTILAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINIAL GLOBULAR REGION. MAY PLAY A REGULATORY ROLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.
-!- SUBCELLULAR LOCATION: Secreted; extracellular matrix (By

PUNCTION: THIS PROTEOGLYCAN IS A MAJOR COMPONENT OF EXTRACELLULAR HATRIX OF CARTILAGENOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEIN IS TO RESIST COMPRESSION IN CARTILAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION.

-!- SUBUNIT: Interacts with FBLN1 (By similarity).

-!- SUBCELLULAR LOCATION: Secreted; extracellular matrix (By

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
